Title of the Project

Go, change the world®

Digitally Decoding Heritage

- **Replacing Traditional Guides** :Tourists often rely on guides who may provide inconsistent or incomplete information. This GUI offers a reliable, standardized source of knowledge.
- **Enhanced Accuracy** : By using verified data sources, the system ensures precise and comprehensive information about sculptures and their historical or cultural significance.
- **Engaging Learning Experience**: Interactive categorization and pop-ups make learning enjoyable, especially for younger audiences or those new to the temple's history.
- **Accessibility**: This system can cater to diverse audiences, including those with language barriers, by providing multilingual support and visual aids.
- **Preservation of Cultural Heritage**: Digitally archiving and categorizing sculptures helps preserve information about them for future generations.
- **Scalability**: The system can be extended to other temples or heritage sites, making it a versatile tool for cultural tourism.
- **Real-Time Exploration**: Users can quickly explore related sculptures within the same category without the need for manual navigation or external resources.
- **Self-Paced Tours**: Visitors can explore at their own pace, accessing information whenever they want, without being bound

QUESTIONNAIRE

Go, change the world®

How often do you travel to learn about sculptures?

93 responses

Copy chart

- Never
- Rarely(1-2 times a year)
- Occasionally(3-5 times a year)
- Frequently(6+ times a year)

Which feature would you find most useful in a technology-based learning tool for sculpture history?

93 responses

Copy chart

- Interactive timelines
- 3D models or sculptures
- Audio descriptions and narratives
- User generated content and discussions
- Both 2 and 3

What type of technology do you currently use to learn about art and sculpture?

92 responses

Copy chart

- Smartphone apps
- Virtual reality (VR) experiences
- Online courses or videos
- None

How comfortable are you with using technology (apps, AR, VR) to learn about art and sculpture?

93 responses

QUESTIONNAIRE

Go, change the world®

What concerns do you have about learning the history of sculptures through technology instead of traditional methods?

Copy chart

93 responses

What motivates you to use technology for learning about the history of sculptures?

Copy chart

92 responses

Would you prefer using an app that provides historical context and information about sculptures over reading traditional books or guides?

Copy chart

93 responses

Which type of information would you prioritize when learning about a sculpture through digital platform?

Problem Statement

Go, change the world®

The Beluru Chennakeshava Temple, renowned for its intricate sculptures and cultural heritage, often leaves visitors reliant on inconsistent guide information. This limits their understanding and access to related sculptures.

To address this, we are creating an interactive GUI system that allows users to:

- Scan sculptures using a camera.
 - Access detailed, accurate information.
 - View related sculptures through category-based pop-ups.
- This solution modernizes exploration, offering an engaging and self-paced alternative to traditional guided tours while preserving the temple's heritage.

Engineering®

Proposed Methodology

Go, change the world®

Prototyping Tools and Technologies

Expected Outcome

The system begins by scanning a QR code using a camera or scanner, decoding it with Pyzbar to retrieve a unique ID. This ID queries an SQLite database to fetch information about the sculpture, including its photo, description, and category.

The details are displayed using Tkinter, with an optional text-to-speech feature using gTTS for audio narration. A pop-up shows related sculptures from the same category, allowing users to explore further before repeating the process or exiting.
